

Lift & Drop Series Light Box

Let Us

do the lifting for you!

The Lift & Drop light box series is a combination of light boxes designed to interconnect with each other. Created to provide a unique alternative to traditional displays, the series offers dozens of different arrangements to create patterns of light boxes in a building block fashion. The aluminum constructed series is used in a variety of retail environments. Our history of designing and producing lighting fixtures for over 50 years ensures that your image is free of shadows and hot spots. The Lift & Drop image carriers change from the front so graphic replacement is a breeze.

We guarantee the best prices available. You won't see us at trade shows or in trade publications doing 4-color ads, we want to pass those savings on to you. Call us now. We will not be outbid!

The Advantage

- Extruded aluminum face frame allows for full front loading of graphics
- Color corrected T8 lamps offers lamp-to-lamp consistency while showing truer graphic colors
- Units can be stacked above, below and side-to-side to create patterns in a building block fashion
- Lightweight aluminum construction provides strength and allows for knockouts to electrically and mechanically join unit to unit
- Electronic ballast affords energy savings of 20%-40% over traditional magnetic ballast
- Wire unit-to-unit to provide power for multiple locations
